

Gord Quinlan
Single Point of Contact
Work Control
Darlington Nuclear Generating Station

To whom it may concern,

George Manuel worked as an Intern in the Work Control Department at Darlington Nuclear Generating Station from June 6, 2018 to July 31 2019 where I work as the Single Point of Contact in Work Control. George consistently demonstrated the ability to learn quickly and maintained the reputation of someone that can be relied on.

George accepted and volunteered for increasingly challenging tasks during his internship and held responsibility for providing oversight to ensure the completion of routine maintenance before late dates as specified by our regulator. During this role George has been able to influence technical personnel to realign their priorities with station priorities. George also showed initiative by improving software we utilize in our day to day tasks resulting in efficiency improvement.

George has a positive attitude and a calm confident disposition. This demeanor has been demonstrated as he has chaired meetings, coordinated the planning of work, and assigned work to field staff.

I believe George will be a positive asset to any organization.

Sincerely,

Gord Quinlan
